

THE HIGH PERFORMANCE VEHICLE DESIGNED TO KEEP YOU ON THE ROAD TO RICHES.

The first thing you notice when you climb aboard POWER DRIFT are the brilliant, oversize 3-D graphics. What you don't notice are your knuckles turning white as you struggle to maintain control through hairpin corners, steep climbs and roller coaster-like dropoffs.

POWER DRIFT is the first high-action simulator game to use triple axis, point-of-view graphics. What that means, quite simply, is that the driver's point of view moves with the steering wheel. Right/left, up/down, and forward/backward movements are seen in exactly the same manner as the human eye. Take a corner too fast and you'll see the world take a 360° spin around you.

But the SEGA engineers didn't stop there, so neither does the fun. The Deluxe POWER DRIFT features a cockpit seat that leans up to 20° in response to driver commands. Both models feature 2-speed shifter, accelerator pedal, foot brake, and stereophonic sound.

POWER DRIFT players are offered a choice of 12 colorful drivers and five challenging courses. Each race course features up to five stages.

Call your authorized SEGA distributor for a POWER DRIFT demonstration ride. It gives a whole new meaning to the term high performance vehicle.
